MOBILE DEWATERING SLED

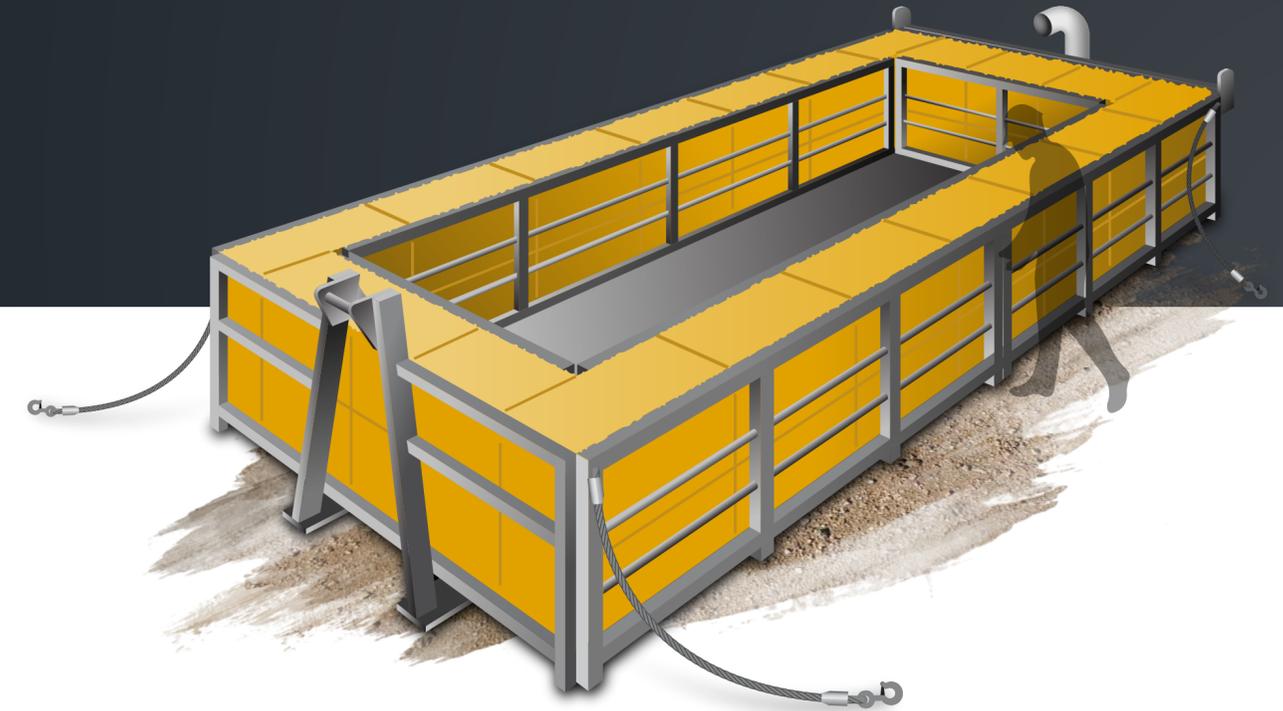

MOBILE DEWATERING SLED

ROWD sleds are a mobile and reusable dewatering structure that transforms how dewatering is completed. The ROWD sled eliminates the single-location constraints of conventional dewatering structures, reduces the risk of environmental compliance issues and simplifies the entire dewatering process to save significant time and money.

Designed for all types of projects, the ROWD sled's sturdy steel frame provides a properly built structure in even the most challenging conditions. Use the versatile ROWD sled to easily take any dewatering job from start to finish, environmentally compliant, economically and efficiently.

BENEFITS

- Help Eliminate Environmental Noncompliances Due to Straw Bale Structure Failures
- Easily Move From Site to Site
- Use Either Straw Bales or Composite Filter Sock to Complete Dewatering
- Complete Project Dewatering at a Fraction of the Cost
- Pump and Relocate as Many Times as Necessary to Dewater an Entire Project
- Use Over and Over by Simply Replacing Filter Material as Needed
- Reduce Landowner Concerns With Easy Removal as Soon as Dewatering Is Complete

FEATURES

- Provides a Properly Built Structure for Use in Even the Most Challenging Locations
- The Use of a Lifting Harness Allows the ROWD Sled to Be Picked up and Set in Any Location
- Easily Disassembled and Stacked for Hauling
- Solid Steel Deck Allows for Leveling on Uneven Ground
- Filter Material Locks Between the Sturdy Frame, Preventing It From Shifting
- Shutoff Valve Can Be Closed to Prevent the Sediment Trapped Inside the Filter Bag From Escaping During Relocation
- Flexible but Rigid Hose Withstands a Tight Clamp Without Being Crushed
